

Maloya Labs.

We are a new type of consulting and training firm that helps organizations building cross-disciplinary innovation skills, facilitating innovation practice, and implementing *state-of-the-art* innovation competency.*

Maloya Labs' advisors and facilitators are trained in Chicago – besides Silicon Valley the heart-beat of human-centered innovation best practices – and bring the *US innovation spirit* to service, industry and health care organizations as well as to selected University and continuing education programs in Switzerland, Europe and China.

Our experience tells us that by enabling forward thinking organizations and individuals in constructing clear-cut pathways through unstructured problem territories helps them creating better value propositions, building more customer-focused organizations, maximizing energy for cross-disciplinary co-creation, and boosting capacity for continuous adaptation.
